

- Work area to be clear prior to installation (width of door and 3 meters back)
- No other persons in the work area during installation
- Inside face on sides and above door to be flush
- Wall and ceiling to be lined prior to installation and all paint/plaster to be completely dry

**Warning:** Delays or non installation due failure to adhere to these instructions may incur additional charges.

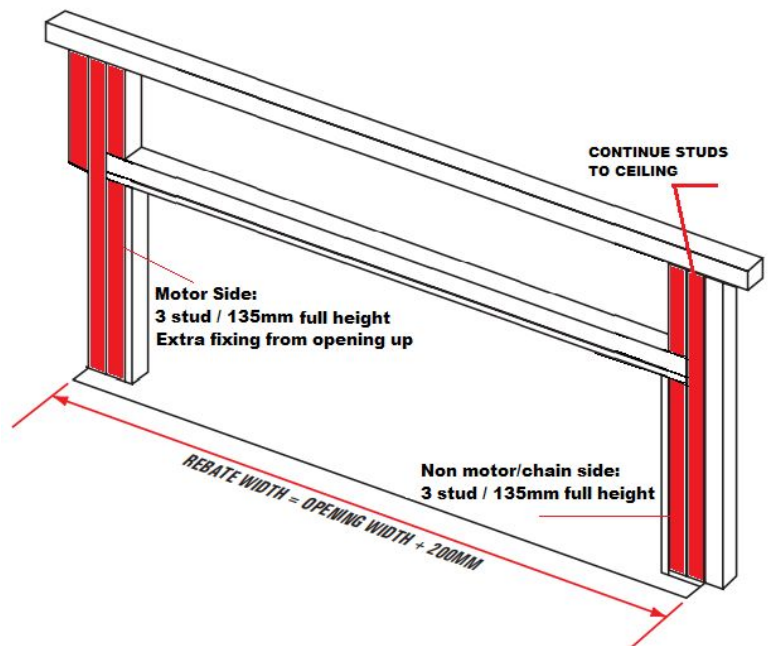

**Note:** Side fixing for the motor or chain is dependent on which side of the door it is on. The sides are indicated as left (L) or right (R) looking from the inside of the garage outwards.

All measurements are in millimetres.

**Minimum Clearances:**

|                            |                             |
|----------------------------|-----------------------------|
| Headroom (up to 3300h)     | 500                         |
| Backspace (up to 3300h)    | 570                         |
| Headroom (3300-5000h)      | 600                         |
| Backspace (3300-5000h)     | 670                         |
| Side Fixing no motor/chain | 135                         |
| Side Fixing Chain          | 225 (L) / 240 (R)           |
| Side Fixing GDO10          | 250 (L) / 270 (R)           |
| Side Fixing GDO12          | 190 (L) / 210 (R)           |
| Windlock                   | Add 50 to above side fixing |

Rebate 100mm past opening  
100mm back from architrave  
25mm deep

**Note:** Headroom is measured from the underside of the trim to the lowest point. This includes any GIB cove or beams that are lower than the ceiling.

**Note:** For Automatic operation a power point is required on the wall within 1.0m of the unit.
